advent of small handheld electronic
devices has created a variety of new and
old problems for data and content
management. These problems include
displaying, selecting and moving large
amounts of data to a handheld device
without consuming too much power. It is
not uncommon for a user to carry a
range of many different types of data,
including music, photos, and videos.
Often this data is stored as a collection
of files, which must then be copied or
otherwise transported to the electronic
device. Files are relatively small data

objects and are usually stored in a single file. Thus, handling and transporting large amounts of files is not burdensome. However, the number of files that must be moved is multiplied by the number of files stored in the collection. Files, which are typically organized as text files, are often copied to portable electronic devices in plain text. Thus, the text files must be parsed into a form that can be easily handled by the handheld device. As may be appreciated, this parsing of text files takes both time and memory resources. The collection of files can also be copied to portable electronic devices in
