
Jobfuscate

In short: jobfuscate will: - change your class names, variables and methods to meaningless names; - change the bytecode of your classes; - change your bytecode in a way that will not result in errors; - store your classes/variables/methods in a jar file; - protect the jar file from being decompiled (undecoded) with Java decompilers; Jobfuscate will not change any of the following: - your source code; - the names of any packages that you use; - method names in any library classes. Test the jobfuscate program: Test the jobfuscate program by typing it into the command line. If it says that you need Java 5, your version of Java is too old. The program requires Java 6. After running jobfuscate: The jar file you created by jobfuscate will be stored in the current working directory. The jar file is not named "myprog.jar". Remove the jar file: To remove the jar file, remove the jar file from the current working directory. View the contents of the jar file: To view the contents of the jar file, use a Java decompiler and a class file editor to view the byte code in the jar file. Download Jobfuscate: latest-news A BASIX season ticket holder has posted on Facebook that an assault on her husband as he attempted to attend a football match is "insulting". The post, originally written in Polish, is below: "My husband and I received two letters in the mail today, [the first] to the address stated, and [the second] to my personal address. He had [just] been celebrating Passover, and had his wallet with him, because we would be going to the football match. So we got up [at] 4am and drove to the address, where we were told to come back at 5.30am. "I understand he is the first one to get to the match and the last one to leave, but what I don't understand is, why
