We have developed a new virtual keyboard macro utility that will fit in easily with existing keyboard macro systems. You can now easily create your own keyboard macro for your own unique needs. You can capture your keyboard activity into a macro file and then define a keyword to be expanded when a particular key combination is pressed. If you like the way you type, you can copy and paste it. The purpose of this utility is to help you capture your repetitive typing into a single keystroke. To accomplish this, we have set up a "hash" system where you can save commonly typed phrases into a user defined macro. You can even capture your typing into a macro and save the file to disk. KEYMACRO provides the following features: ? Capture keyboard input into a text file. ? Macro key definitions for quick and easy access to common phrases. ? Editing functions to easily add, delete and change keywords. ? Ability to define a file name to be used as the macro name. ? Ability to control your macro for repeatability. ? Ability to cycle through the macro names in a list. ? Ability to add file type associations for the macro file extension. ? A test mode to test for a valid macro. ? Ability to "cut and paste" to a windows clipboard. ? Keyboard events can be handled. ? Visual presentation of the text file where the macro is being created. ? Ability to delete all the macros at once. KEYMACRO requires VBScript 2.0 to run. A free trial version is available for download. KEYMACRO is a small and easy to use program that does what it is supposed to do. In some cases, I've found it much more efficient than a keyboard macro program that has many more features and a lot more options. MyNARCS v4.0 Description: MyNARCS is a program that lets you control your MetaEdit-generated text files from a program of your choice. It supports two types of mouse-button-based commands, mouse-only and keyboard-only, to control and manipulate the text files, as well as create new ones. Not just an abstract for the popular text editor and Notepad, the program also has a built-in text-file editor that lets you do just about anything you want with the file. You can save, open, modify, copy, paste, and delete a file, and much more. There is also a text file creation function in 77a5ca646e
