October 1, 2013 Create a professional layout in InDesign Just a few minutes – that’s all it takes to create a stunning professional layout in Adobe InDesign. This approach works in conjunction with InDesign CS6/CC and the new Typography panel that can be accessed by clicking the Pages > Typography options icon. The Typography panel includes tools for designing guidelines, managing kerning and lining, and creating custom font collections. It also includes controls for defining both exact and live

kerning. Typography panel Get inspired with all the typographic features available in the new InDesign (and make your own!) Introducing the Typography panel, which appears when you click the Pages > Typography options icon in InDesign. The Typography panel gives you a graphic editing interface dedicated to both custom typography creation and design features such as kerning and lining. Designing kerning with the Typography panel

The new Typography panel is a great tool for designing and customizing typography on a page. Design guidelines are automatically created during the export to give a professional finish to your documents. In addition, the panel makes it easy to manage and apply both exact and live kerning. With the Typography panel you can:

- Design and create custom typefaces
- Design live typefaces, which are dynamically updated based on your type selections and kerning
- Control the spacing between typefaces
- Apply a uniform baseline and left/right margins
- Customize layouts with space and information boundaries
- Create a set of guidelines to set up your text

Approach designing and creating typefaces The Typography panel helps you approach designing and creating typefaces by providing tools for defining type families, designing custom typefaces, creating custom fonts for non-standard points, creating custom fonts using the Glyphs panel, and using

kerning to fine-tune the spacing between type faces. The new Typography panel is the perfect place to start when designing customized type treatments for your layouts.
