There are 10 keyboards to choose from. You can select the one which fits your needs. KEYMACRO is a keylogger that you can use to obtain a list of the keys you press. It can also be used as a button logger. It works in two modes. In the normal mode, it listens to the pressing of keys and stores the keys pressed in a file located in the directory of your choice. In the button mode, KEYMACRO can be used as a mouse. It records the X and Y coordinates of the mouse cursor and stores them in a file. You can choose

the file location to save the button events into. You can also choose to have both the keylog and mouse recorded together in the same file, or you can record them separately.
